

## The Radon Aeration Filter

Have you considered that your water might hold hidden risks? Radon, a radioactive gas, naturally seeps into well water. It stays trapped there until the water reaches your home. When released, radon doesn't just vanish; it enters the air you breathe. Showers -where water is heated and agitated- often carry the highest concentration.

### Features

- 99% Radon Removal
- Streamlined modular design
- Proprietary Quadtrain air injector nozzle with flow rates of 2.5 - 10 gallons. (can be custom configured based on well capacity)
- Turbulence ensures radon in water gets released
- Force of blower ensures radon gas is safely vented outside
- Transducer monitors tank level
- Controller will cycle pump off and on as needed to deliver treated water for your home
- DROP Hub included
- Part Number D-ZPR13

### Benefits

ZappR protects your family from the risks of radon. As water enters the ZappR system, it flows into a controlled aeration zone. A specialized blower introduces air, activating a mass transfer process that safely separates radon from the water. The radon gas is safely vented outside, far from your home. While clean, radon-free water flows back into your system. With ZappR, you can breathe easy knowing your water is radon-free, with a solution built for pure peace of mind.

### The DROP Hub

All DROP products require the function of the DROP Hub. The Hub is the connection to everything on the DROP Smart Water Management System. It integrates all of the DROP water devices together.

## Model

## D-ZPR13

### Treatment Rate

2.5 - 10 GPM (can be custom configured based on well capacity)

### Flow Rates

Up to 20 GPM

### Minimum Space Required

D: 28in W: 72in H: 80in

**Electrical Control** - Operates the domestic delivery pump and protects its operation from run dry and overcurrent. Reads tank levels without floats through the DROP pressure transducer. Cycles inlet valve and blower plus optional chlorine feed pump

#### Expandable Holding Tank System Tailored to Your Home -

Additional holding tanks can be added to the system to increase treated water storage when needed.

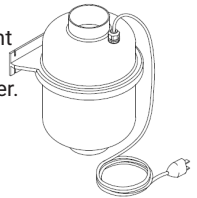

2" PVC Connection Point for  
Radon Venting System

#### High-Performance Blower System:

**1 HP, 120-Volt Motor**  
Delivers strong, consistent airflow with standard household power.

**Pressurizes the Tank**  
Efficiently forces radon-contaminated air out through the top exhaust.

**Includes Replaceable Air Filter**

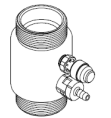

**Internal 120V Repressurization Pump**  
1/2 HP  
Up to 12 GPM at 60 PSI

Requires an additional pressure tank,  
not included

#### Proprietary Quadtrain Technology:

**Adjustable Flow Rate**  
Tailor the system's performance to your home or facility's water supply.

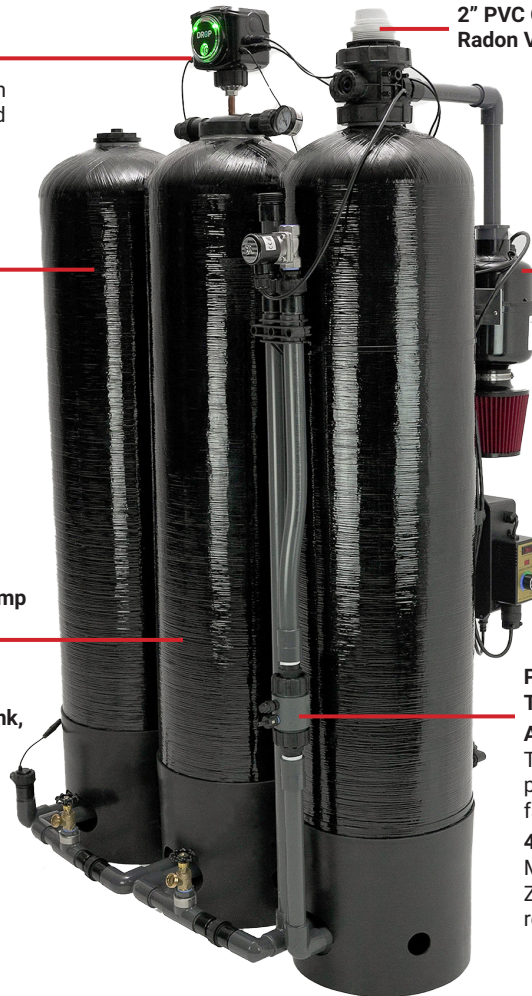

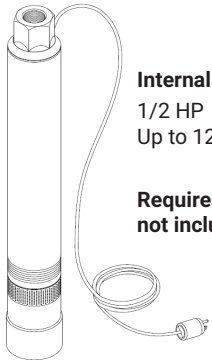

**4 Injector Design**  
Maximizes air draw into the ZAPPR tank for superior radon removal.

Quadtrain

Injector

### The DROP Hub (included)

The hub is the connection to everything on the DROP Smart Water Management system. It integrates all of your DROP water devices together.

### The DROP Remote (optional)

This unique device is an excellent accessory with any other DROP product. This smart remote lets you turn on/ off your water with a convenient button, notifies you of new system status events, and extends your wireless DROP Link network.

### The DROP Leak Detector (optional)

Never worry about coming home to frozen pipes, absurdly high water bills or a soaked kitchen. These inconspicuous water-saving devices integrate with our smart water monitoring system to safeguard your home.
